Internship Report

On

Amdox ERP - AI Powered Cloud WEB DEVELOPMENT

Submitted in Partial fulfilment of the award of the Bachelor of Technology
in

Department of Computer Science and Engineering

By

Jakkula Kavya Sri (241U1R1067)

GUIDED BY

MR. RAJESHWAR

DEPT OF MCA

AURORA UNIVERSITY

MENTORED BY

MR. Sunil Kumar

AURORA HIGHER EDUCATION AND RESEARCH ACEDAMY

(Deemed to be University)

Parvathapur, Uppal, Hyderabad-500 098

DEPARTMENT OF COMPUTER SCIENCE AND ENGINEERING

DECLARATION BY THE CANDIDATE

I, **JAKKULA KAVYA SRI** bearing Registration Number **241U1R1067**, hereby declare that the Internship report entitled “**Amdox ERP-AI Powered Cloud Enterprise Suite** ” under the guidance of **MR. RAJESHWAR**, Department of **Computer Science and Engineering**, **Aurora’s Higher Education and Research Academy, Uppal** is submitted in partial fulfillment of the requirements for the award of the degree of **B.Tech in Computer Science and Engineering**

This is a record of Bonafide work carried out by me and the results embodied in this project have not been reproduced or copied from any source. The results embodied in this Internship report have not been submitted to any other university or institute for the award of any other degree or diploma.

Name: JAKKULA KAVYA SRI

Reg. No.: 241U1R1067

**AURORA'S HIGHER EDUCATION AND
RESEARCH ACADEMY
UPPAL, HYDERABAD**

AURORA'S HIGHER EDUCATION AND RESEARCH ACADEMY

(Deemed to be University)

Uppal, Hyderabad, Telangana, +91 9100123456, aurora.edu.in

CERTIFICATE

This is to certify that the **Comprehensive Internship Report** entitled "**Amdox ERP-AI Powered Cloud Enterprise Suite**" submitted by **Jakkula Kavya Sri** bearing **Registration Number: 241U1R1067** in partial fulfillment of the requirements for the successful completion of the Internship Course in the **2nd Year, 4th Term** of the **CSE Program** at Aurora's Higher Education and Research Academy is an authentic compilation of his/her efforts, carried out under our guidance.

We appreciate and commend his/her dedication and sincere efforts throughout the internship.

Internal Examiner

Head of the Department

External Examiner

ACKNOWLEDGEMENT

I am very pleased to present this major internship report. This period of my student life has been truly rewarding several people were of immense help to me during my research and the preparation of my Comprehensive project report.

First, I wish to thank God Almighty who created the heavens and earth and helped me in completing this project.

I thank my parents who encouraged me to continue my Undergraduate studies, to my father and mother.

I wish to express our heart full thanks to our Class Incharge MR. Rajeshwar Sir, whose support was indispensable to us during this internship.

I would also thank Dr. Chandrashekar, Registrar of our University, for extending his help.

I would also thank Dr. Mahesh Sunkari, Dean School of Engineering of our University, for extending his help

STUDENT - INTERNSHIP DETAILS

Name of the Student	Jakkula Kavya Sri
Roll No	241U1R1067
Name of the Department	CSE - C
Year	2nd Year
Term	IV Term
Academic Year	2024 - 2028
Company Name 1	Amdox Technologies
Categories of The Company	Amdox Technologies
Dates of internship	From: April 27 To: June 27
Designation Offered	FULL STACK WEB DEVELOPMENT
Mode of internship	Online + Stipend
Stipend	10000
Organization Address	Bangalore
Recommendation of the company by	-
Company Mentor	Mr. Sunil Kumar
University Mentor	Mr. Rajeshwar

SCANNED COPIES OF WEEKLY STATUS REPORTS

Week	Activity	Status
Week 1	Internship induction, company orientation, project overview, requirement analysis, and understanding the ERP system.	Completed
Week 2	UI/UX design planning, database design, authentication module development, and frontend project setup.	Completed
Week 3	Development of User Authentication, Role-Based Access Control (RBAC), Employee Management module, and backend REST APIs.	Completed
Week 4	Development of Human Resource Management and Finance Management modules, database integration, and CRUD operations.	Completed
Week 5	Development of Supply Chain Management, Inventory Management, and Project Management modules with frontend-backend integration.	Completed
Week 6	AI Forecasting module implementation using FastAPI and OpenAI API, API testing, and business analytics integration.	Completed
Week 7	Integration of all ERP modules, notification system, audit logging, bug fixing, authentication improvements, and performance optimization.	Completed
Week 8	System testing, User Acceptance Testing (UAT), debugging, database optimization, security validation, and documentation.	Completed
Week 9	Feature enhancements, deployment preparation, technical documentation, code review, and mentor feedback	Completed

	implementation.	
Week 10	Final deployment, project presentation, report submission, and internship completion.	Completed

CHAPTER - 1

INTRODUCTION

1.1 About the Internship

The internship provided me with an opportunity to gain practical experience in Full Stack Web Development by working on an enterprise-level application named Amdox ERP – AI-Powered Cloud Enterprise Suite. During the internship, I participated in designing and developing different modules of an Enterprise Resource Planning (ERP) system that integrates multiple business operations into a centralized platform.

The project was developed using modern web technologies including React, NestJS, PostgreSQL, TypeScript, and AI-based services. The internship helped me understand the complete software development life cycle, including requirement analysis, frontend development, backend API development, database management, authentication, testing, debugging, and deployment.

Working on this project enhanced my technical knowledge and exposed me to real-world software development practices followed in the IT industry.

1.2 Objectives

The major objectives of this project are:

- To develop an integrated ERP system for business management.
- To automate business operations using a centralized platform.
- To implement secure user authentication and role-based access control.
- To manage employee, finance, inventory, and project information efficiently.
- To integrate Artificial Intelligence for business forecasting and decision support.
- To develop scalable REST APIs for communication between frontend and backend.
- To improve practical knowledge of Full Stack Web Development through real-time project implementation.

1.3 Scope of the Project

The Amdox ERP system provides a centralized platform for managing different organizational activities. The project can be used by organizations to:

- Manage employee information.
- Maintain financial records.
- Track inventory and supply chain operations.
- Manage organizational projects.
- Generate AI-based demand forecasting.
- Monitor user activities through audit logs.
- Provide secure authentication and authorization.
- Improve decision-making through real-time dashboards and analytics.

Future enhancements may include mobile application support, cloud deployment, advanced AI analytics, chatbot integration, automated report generation, and multi-organization support.

CHAPTER - 2 **COMPANY PROFILE**

2.1 About the Company

The internship was carried out at [Your Company Name], an organization focused on software development, web technologies, cloud computing, and enterprise application development. The company provides innovative software solutions that help businesses improve operational efficiency through modern technologies.

The organization specializes in developing scalable web applications, enterprise management systems, cloud-based platforms, and AI-powered solutions. It also provides internship opportunities that enable students to gain practical experience by working on real-world projects under the guidance of experienced professionals.

The company encourages project-based learning and follows modern software development methodologies, allowing interns to understand the complete software development life cycle from requirement analysis to deployment.

Services Offered

The company provides services in the following domains:

- Full Stack Web Development
- Enterprise Resource Planning (ERP) Solutions
- Cloud Computing
- Artificial Intelligence and Machine Learning
- REST API Development
- Database Design and Management
- Software Testing and Deployment
- Web Application Development

Through practical project implementation, the company helps interns improve their technical, analytical, and problem-solving skills while preparing them for careers in the IT industry.

2.2 Internship Details

Company Name: [Your Company Name]

Internship Role: Full Stack Web Development Intern

Project Title: Amdox ERP – AI-Powered Cloud Enterprise Suite

Duration: 10 Weeks

2.3 Roles and Responsibilities

During the internship, I actively participated in the design and development of the Amdox ERP system. My responsibilities included:

- Understanding business requirements and ERP workflows.
- Designing responsive frontend interfaces using React and TypeScript.
- Developing backend REST APIs using NestJS.
- Integrating frontend components with backend services.
- Designing and managing the PostgreSQL database.
- Implementing secure authentication and role-based access control.
- Developing ERP modules such as Finance, Human Resources, Supply Chain, and Project Management.
- Integrating AI-based features for business forecasting and intelligent recommendations.
- Performing CRUD operations and API testing using Postman.
- Debugging application issues and optimizing system performance.
- Using Git and GitHub for version control and collaborative development.
- Testing the application and ensuring smooth functionality before deployment.

The internship provided valuable exposure to enterprise software development, modern web technologies, database management, API integration, authentication mechanisms, AI integration, and professional software development practices.

CHAPTER - 3

PROJECT IMPLEMENTATION

3.1 Project Overview

The Amdox ERP – AI-Powered Cloud Enterprise Suite is a modern web-based Enterprise Resource Planning (ERP) application developed to integrate and automate various business operations within a single platform. The system enables organizations to manage departments such as Finance, Human Resources, Supply Chain, Project Management, and Inventory while providing AI-powered insights for better decision-making.

The application follows a client-server architecture where the frontend communicates with the backend through REST APIs. PostgreSQL is used as the primary database for storing organizational data securely, while AI services provide forecasting and intelligent business recommendations. The system is designed to improve operational efficiency, reduce manual work, and enhance productivity through automation.

3.2 Technologies Used

Frontend

- React.js / Next.js
- TypeScript
- Tailwind CSS
- HTML5
- CSS3

Backend

- NestJS
- Node.js
- REST APIs
- TypeScript

Database

- PostgreSQL
- Prisma ORM / TypeORM

Artificial Intelligence

- Python
- FastAPI
- OpenAI API
- AI-Based Forecasting Models

Development Tools

- Visual Studio Code
- Git
- GitHub
- Postman
- npm

3.3 System Architecture

The Amdox ERP system follows a layered architecture consisting of the following components:

Presentation Layer

The frontend provides an interactive and responsive user interface that allows users to manage different ERP modules through a web browser.

Business Logic Layer

The backend processes user requests, validates data, handles authentication and authorization, implements business rules, and communicates with the database using secure REST APIs.

Database Layer

PostgreSQL stores organizational information such as employee records, financial transactions, inventory details, project information, and user credentials in a secure and structured manner.

AI Layer

The AI module analyzes historical business data and generates demand forecasting, business insights, and intelligent recommendations to support organizational decision-making.

3.4 Main Features

The ERP system consists of multiple integrated modules:

Authentication Module

- User Registration
- Secure Login
- JWT Authentication
- Role-Based Access Control

Finance Management

- General Ledger
- Accounts Payable
- Accounts Receivable
- Vendor Management
- Financial Reports

Human Resource Management

- Employee Records
- Payroll Management
- Leave Management

- Employee Information Tracking

Supply Chain Management

- Product Management
- Inventory Tracking
- Purchase Orders
- Stock Monitoring

Project Management

- Project Creation
- Task Assignment
- Milestone Tracking
- Progress Monitoring

AI Forecasting Module

- Demand Prediction
- Business Insights
- Intelligent Recommendations
- Forecast Generation

Notification Module

- System Notifications
- Alerts
- Activity Updates
- Important Reminders

Audit Logging Module

- User Activity Tracking
- Security Monitoring
- System Change Logs

3.5 Project Workflow

The overall workflow of the ERP system is as follows:

1. User Registration
2. Secure User Login
3. Authentication and Authorization
4. Dashboard Access
5. Employee, Finance, Inventory, and Project Management
6. Data Storage in PostgreSQL Database
7. AI-Based Forecasting and Business Analysis
8. Report Generation and Notifications
9. Audit Logging
10. User Logout

Outcome:

The Amdox ERP – AI-Powered Cloud Enterprise Suite was successfully developed as a centralized enterprise management application. The system integrates multiple business operations into a single platform, reducing manual effort and improving operational efficiency.

The project provides secure authentication, employee management, finance management, inventory tracking, project monitoring, AI-powered forecasting, notification services, and audit logging.

Through this internship, I gained practical experience in Full Stack Web Development using React, NestJS, PostgreSQL, REST APIs, authentication, database management, AI integration, debugging, testing, and software deployment. This project significantly strengthened my technical skills and enhanced my understanding of real-world enterprise software development.

RESULTS

A screenshot of a web application's login page. The background is a dark navy blue. In the center, there is a light gray rounded rectangle containing the login form. At the top of this rectangle, the text 'Welcome Back' is displayed in bold, followed by 'Login to continue to your dashboard' in a smaller font. Below this, there are two input fields: 'Email' with the placeholder 'Enter your email' and 'Password' with the placeholder 'Enter your password'. A blue 'Login' button is positioned below the password field. At the bottom of the form, there is a link that says 'Don't have an account? Register' and a footer that reads '© 2026 ERP Dashboard'. A small circular icon with the letter 'N' is visible in the bottom left corner of the dark background.

A screenshot of a web application's registration page. The background is a dark navy blue. In the center, there is a light gray rounded rectangle containing the registration form. At the top of this rectangle, the text 'Register' is displayed in bold, followed by 'Create your account' in a smaller font. Below this, there are two input fields: 'Enter email' and 'Enter password'. A green 'Register' button is positioned below the password field. At the bottom of the form, there is a link that says 'Already have an account? Login'.

localhost:3000 says

Registration successful!

CHAPTER - 4

CHALLENGES FACED

Developing the Amdox ERP – AI-Powered Cloud Enterprise Suite involved several technical and implementation challenges. Since the project integrates multiple enterprise modules and modern technologies, various issues were encountered during development. Each challenge provided an opportunity to improve problem-solving skills and gain practical experience in full-stack application development.

Challenge 1: Authentication and Authorization

Implementing a secure authentication system with role-based access control was one of the initial challenges. Different users such as administrators, managers, and employees required different levels of access to ERP modules.

Solution

Implemented JWT-based authentication and role-based authorization using NestJS guards and middleware. Access permissions were assigned according to user roles, ensuring secure access to application resources.

Challenge 2: Database Integration

Designing a centralized database to manage employee records, financial transactions, inventory, projects, and user information while maintaining data consistency required careful planning.

Solution

PostgreSQL was used as the primary database, and Prisma ORM/TypeORM was implemented to manage database operations efficiently. Proper relationships, constraints, and validations were created to ensure data integrity and minimize redundancy.

Challenge 3: API Development

Developing REST APIs for different ERP modules and ensuring smooth communication between the frontend and backend required careful API design and testing.

Solution

Developed modular REST APIs using NestJS and TypeScript. All APIs were tested using Postman, and appropriate error handling, validation, and response structures were implemented to ensure reliable communication between client and server.

Challenge 4: AI Integration

Integrating AI capabilities for demand forecasting and business insights required connecting the ERP application with AI services and processing organizational data efficiently.

Solution

Integrated Python-based AI services using FastAPI and connected them with the ERP backend through REST APIs. Historical business data was processed to generate forecasting results and intelligent recommendations, improving decision-making capabilities.

Challenge 5: Deployment and Testing

Preparing the application for deployment involved resolving dependency conflicts, configuring environment variables, testing application modules, and ensuring consistent performance across different environments.

Solution

Performed comprehensive testing of frontend, backend, authentication, database operations, and AI services. Configuration issues were resolved, dependencies were updated, and the application was successfully deployed in a testing environment. Continuous debugging and optimization improved the application's stability, security, and overall performance.

CHAPTER - 5 **SKILLS AND KNOWLEDGE GAINED**

The internship provided me with valuable practical exposure to enterprise software development and significantly enhanced both my technical and professional skills. Working on the Amdox ERP – AI-Powered Cloud Enterprise Suite allowed me to understand modern full-stack development practices and gain hands-on experience with industry-standard technologies.

Technical Skills

During the internship, I developed the following technical skills:

- React.js / Next.js Development
- TypeScript Programming
- NestJS Backend Development
- Node.js Application Development
- REST API Design and Development
- PostgreSQL Database Management
- Prisma ORM / TypeORM
- JWT Authentication and Role-Based Access Control
- AI Integration using FastAPI and OpenAI API
- CRUD Operations
- Git and GitHub Version Control
- API Testing using Postman
- Responsive Web Design with Tailwind CSS
- Debugging and Performance Optimization

- Software Testing and Validation

Professional Skills

The internship also helped me improve several professional and interpersonal skills, including:

- Problem-Solving and Analytical Thinking
- Team Collaboration
- Effective Communication
- Time Management
- Task Planning and Execution
- Technical Documentation
- Adaptability to New Technologies
- Attention to Detail
- Critical Thinking
- Debugging and Troubleshooting
- Continuous Learning and Self-Improvement

Knowledge Gained

Through this internship, I gained a deeper understanding of enterprise application development and modern software engineering practices. Some of the key areas of knowledge acquired include:

- Enterprise Resource Planning (ERP) concepts and business workflows.
- Frontend and backend integration using REST APIs.
- Database design, normalization, and data management.
- Secure authentication and authorization mechanisms.
- AI-powered business forecasting and intelligent decision support.
- Client-server architecture and layered application design.
- Version control and collaborative software development using Git.
- Software testing, debugging, and deployment strategies.
- Real-world software development life cycle (SDLC) and agile development practices.

CHAPTER - 6

INTERNSHIP EXPERIENCE

INTERNSHIP EXPERIENCE

My internship was a valuable learning experience that provided me with practical exposure to enterprise software development and modern Full Stack Web Development technologies. During the internship, I worked on the Amdox ERP – AI-Powered Cloud Enterprise Suite, a comprehensive web-based Enterprise Resource Planning (ERP) application designed to automate and manage various business operations through a centralized platform.

Throughout the internship, I actively participated in different phases of software development, including requirement analysis, application design, frontend development, backend API implementation, database management, testing, debugging, and deployment. Working on a real-world ERP system helped me understand how multiple business modules such as Finance, Human Resources, Supply Chain Management, Project Management, and AI-based Forecasting are integrated into a single enterprise application.

One of the most valuable aspects of the internship was learning how frontend and backend technologies work together. I developed responsive user interfaces using React.js and TypeScript while implementing RESTful APIs with NestJS and Node.js. I also gained hands-on experience in managing relational databases using PostgreSQL and implementing secure authentication with JWT and role-based access control.

The internship also introduced me to Artificial Intelligence integration within enterprise applications. By working with FastAPI and AI-based forecasting services, I learned how predictive analytics can help organizations make informed business decisions using historical data.

Regular guidance from mentors, continuous code reviews, and testing sessions helped me improve my coding standards, debugging techniques, and software development practices. I also learned the importance of writing clean, maintainable, and scalable code while following industry best practices.

CHAPTER - 7

PERSONAL FEELINGS AND REFLECTION

This internship has been one of the most valuable learning experiences in my academic journey. Working on the Amdox ERP – AI-Powered Cloud Enterprise Suite gave me an opportunity to apply the theoretical concepts learned in the classroom to a real-world enterprise application. Initially, understanding the architecture of an ERP system and integrating multiple business modules into a single platform seemed challenging. However, with continuous learning, guidance from mentors, and regular practice, I was able to overcome these challenges successfully.

Throughout the internship, I gained practical experience in frontend development, backend programming, database management, REST API development, authentication, and AI integration. Developing an enterprise application helped me understand the importance of writing clean, maintainable, and secure code while following industry best practices. I also realized that successful software development requires proper planning, teamwork, effective communication, and continuous testing.

One of the most rewarding aspects of this internship was learning how Artificial Intelligence can be integrated into enterprise applications to provide forecasting and intelligent business insights. This experience increased my interest in modern technologies such as Artificial Intelligence, Cloud Computing, and Enterprise Software Development.

The internship also improved my confidence in solving technical problems independently and strengthened my analytical thinking, debugging skills, and decision-making abilities. Working on different modules of the ERP system taught me the value of patience, consistency, and continuous improvement throughout the software development process.

CHAPTER - 8

KEY LEARNINGS

Throughout this internship, I gained valuable technical knowledge and practical experience by working on the Amdox ERP – AI-Powered Cloud Enterprise Suite. The project helped me understand the complete software development life cycle and strengthened my ability to develop enterprise-level web applications using modern technologies.

The key learnings from this internship are:

- Practical experience in Full Stack Web Development.
- Understanding of Enterprise Resource Planning (ERP) systems and business workflows.
- Frontend development using React.js, Next.js, TypeScript, and Tailwind CSS.
- Backend development using NestJS, Node.js, and RESTful APIs.
- Database design and management using PostgreSQL with Prisma ORM/TypeORM.
- Implementation of secure authentication using JWT and Role-Based Access Control (RBAC).
- Integration of frontend and backend through REST APIs.
- AI integration using FastAPI and OpenAI API for demand forecasting and business insights.
- Performing CRUD operations and API testing using Postman.
- Debugging, troubleshooting, and optimizing application performance.
- Version control and collaborative development using Git and GitHub.
- Understanding layered system architecture and client-server communication.
- Writing clean, maintainable, and scalable code following industry best practices.
- Importance of software testing, documentation, and deployment.
- Time management, teamwork, and effective communication in a professional environment.

CHAPTER - 9

CONCLUSION

The Amdox ERP – AI-Powered Cloud Enterprise Suite successfully achieved its primary objective of developing a centralized and intelligent Enterprise Resource Planning system for managing various business operations. The application integrates multiple modules, including Finance Management, Human Resource Management, Supply Chain Management, Project Management, AI-Based Forecasting, Notification Management, and Audit Logging, into a single secure platform.

Throughout the internship, I gained hands-on experience in designing responsive user interfaces, developing RESTful APIs, managing relational databases, implementing authentication and authorization, integrating Artificial Intelligence services, and testing enterprise applications. Working with technologies such as React.js, Next.js, NestJS, Node.js, PostgreSQL, TypeScript, FastAPI, and Git enhanced my technical knowledge and provided practical exposure to modern full-stack software development.

The project also improved my understanding of enterprise application architecture, client-server communication, database management, and software development best practices. In addition to technical skills, the internship strengthened my problem-solving ability, analytical thinking, communication, teamwork, time management, and documentation skills.

Overall, this internship was a valuable learning experience that enhanced my technical knowledge and practical skills in Full Stack Web Development. It increased my confidence in developing enterprise applications and provided a strong foundation for my future career in the software industry.

OFFER LETTER

Issue Date: 24/04/2026
Employee ID: Adx31ETE6y

INTERNSHIP OFFER LETTER

Internship Start Date: 27-04-2026

Internship End Date: 27-06-2026

Dear Jakkula Kavya Sri,

We are pleased to extend to you this offer for the position of **Web Developer Intern** at **Amdox Technologies**, a forward-looking product-based software company committed to driving innovation through advanced technologies and practical learning. This internship is designed to equip you with real-world exposure to data-driven projects, structured mentorship, and technical skill-building aligned with your academic and career goals.

Your selection is a testament to your demonstrated potential, technical aptitude, and enthusiasm for learning. At Amdox Technologies, we foster a culture centered on collaboration, continuous improvement, and future-focused problem solving, where interns actively contribute to meaningful data initiatives from day one.

As a member of our Web Development team, you will work on real-time development projects, contributing to both front-end and back-end tasks, integrating APIs, and building responsive web applications that enhance our digital products. We are confident that this opportunity will play a key role in shaping your technical and professional journey, and we look forward to your enthusiasm, attention to detail, and dedication to writing clean, efficient code.

Internship Details:

- **Position:** Web Developer Intern
- **Working Hours:** Flexible / As per company policy
- **Duration:** 2 Months
- **Supervisor:** Mr. Sunil Kumar
- **Working Days:** Monday to Friday
- **Time of training:** Evening
- **Project Timing:** Flexible
- **Stipend:** Your stipend will be up to INR 10000/Month for the internship period.

📍 Tech 37, Electronic City, Bengaluru, India, 560100 📞 +91 6362853627 📧 support@amdox.in

Key Responsibilities

As a Web Development Intern at Amdox Technologies, you will play a vital role in assisting our software engineering team in building scalable, efficient, and innovative web applications. Your responsibilities will include:

- Assisting in the development of responsive, high-performance web applications using modern technologies such as HTML, CSS, JavaScript, React, Node.js, and databases.
- Collaborating with the UI/UX team to convert wireframes and design mockups into functional user interfaces.
- Writing clean, modular, and reusable code that follows industry standards and best practices.
- Integrating RESTful APIs and backend services to enable dynamic and interactive features.
- Participating in code reviews, debugging, and performance tuning to maintain application quality.
- Maintaining up-to-date documentation of code, technical specs, and development progress in an agile setup.
- Joining team meetings, sprint reviews, and collaborative efforts to ensure timely project delivery.
- Enhancing your skills through internal training, mentor guidance, and work on real-world development tasks.

Training & Evaluation:

- Your internship experience will be structured around:
- Weekly development tasks (HTML/CSS > JavaScript > React > APIs > Full-Stack Development)
- Assignment to a real-time project based on your skill level and area of expertise
- Mentorship from senior web developers
- Performance reviews at mid-point and conclusion
- Feedback sessions with your assigned mentor

Expected Outcomes - Web Development:

- By the end of the internship, you will:
- Build a fully functional, responsive web application
- Gain hands-on experience with front-end and back-end technologies
- Understand deployment workflows and basic DevOps concepts
- Receive a certificate and project-based recommendation

Confidentiality and Code of Conduct:

1. You will be assigned a Project Mentor at Amdox Technologies, under whose supervision you will carry out your assigned tasks and responsibilities throughout the internship.

2. You are expected to complete all assigned work in a timely and professional manner, maintaining the quality standards, discipline, and ethical conduct in line with the values and expectations of Amdox Technologies.

3. Please note that this internship engagement does not constitute an employer-employee relationship. Accordingly, you will not be entitled to any monetary allowances, employee benefits, or permanent employment guarantees, unless explicitly stated or offered post-internship based on performance.

4. During your internship, you are required to adhere strictly to all internal policies, guidelines, and regulations of Amdox Technologies. You must also ensure the confidentiality, integrity, and security of any proprietary information, project data, source code, intellectual property, or documentation shared with you in the course of your work.

5. A detailed overview of your obligations related to Confidentiality, Data Security, and Intellectual Property Rights is provided in Annexure A. You are expected to read and acknowledge this document prior to the commencement of your internship.

6. If you are currently enrolled in an academic program, you may attend college/university sessions during the internship period only with the prior consent of your Project Mentor, ensuring it does not interfere with your internship deliverables or commitments.

Acceptance and Onboarding:

Please confirm your acceptance of this internship offer using the Offer Acceptance Link provided in your email, within the specified deadline. Failure to respond within the stipulated timeframe will result in the automatic revocation of this offer.

We are excited to welcome you to the Amdox Technologies team and look forward to a mutually enriching and productive internship experience.

Mr. Ranjan Kumar
Executive Director

Nishika Verma
HR Manager

Mr. Sunil Parida
